Retractor

Instrument

see Brain retractor.

see Self-retaining retractor

see Tubular retractor.

Combined retractor and hand-rest system from Gilsbach ¹).

It was developed from the original Leyla retractor system but has the advantage of an integrated hand-rest.

Retraction of white matter overlying a brain lesion can be difficult without causing significant trauma especially when using traditional methods of bladed retractors. These conventional retractors can produce regions of focal pressure resulting in contusions and areas of infarct.
